---

Hi everyone! [Lyn](#) here with you today from [LynzCraftz](#). It's no secret that I love Summer... the Ocean... the Beach... the sound of the waves and the salty sea air - so before Summer ends, I thought I would get in one last Summer project. I've named it "Whale Song" for obvious reasons...

Category:

[Crafts Hobby](#), [How To Use](#)

Products:

[Alumidust](#)

[Alumilite Dye](#)

[Amazing Clear Cast](#)

**Step 1:** I first started with a couple polymer clay whales that I sculpted from [Super Sculpey](#) (baked according to package directions). I left each whale flat on the back so I could glue them down. I glued each down into my mold box, then I poured over a batch of [Amazing Mold Rubber](#) to create the mold ([CLICK HERE](#) to view mixing/preparation). In a few hours, the mold is cured! I removed the originals and it was time to pour some clear blue resin. For the whales I've mixed up [Amazing Clear Cast Resin](#) and Ocean Blue [Alumilite Dye](#)... aren't they cute?

**Step 2:** Then using a wooden canvas I had purchased, I painted it with some acrylic paints. Just a basic underwater type background which will get mostly covered up.

**Step 3:** Here comes the fun part... I mixed up some [Amazing Clear Cast Resin](#) and divided it into 5 small cups; adding [Alumidust](#) to each cup in similar colors to my painted background in 4 of them. In the fifth one, I added a bit of White [Alumilite Dye](#).

**Step 4:** Carefully pouring each of the four colors on their corresponding color area (kinda like a paint by number... LOL), I used a stir stick to help move the colors around. I placed the two original polymer whales along with the blue cast whales into the wet resin on the background and left it to cure for 3-4 hours before continuing.

**Step 5:** The final step was to mix just a touch (the tip of my pallet knife) of the [Alumilite Pearlescent Metallic Powder](#) into another batch of [Amazing Clear Cast Resin](#), then pour this mixture over the entire piece - whales and all.

**Step 6:**

After letting this cure overnight, the results are well... AMAZING! You can see the sparkle from the tiny bit of Pearlescent powder that I added to the final layer of [Amazing Clear Cast Resin](#) - it's so pretty! A little bit of work but well worth it in the end.
